

### Comments from test participants:

Ing. Stanislav Kouřil, engine builder: "Adding +1.5% of power on this naturally aspirated engine is a fantastic result and the new oils proved well they really do what they claim. Together with the NT gear oils this means fast, easy and cheap achievable significant power boost for every racing car. I will do more tests personally on various engines and start recommending to all of my customers."

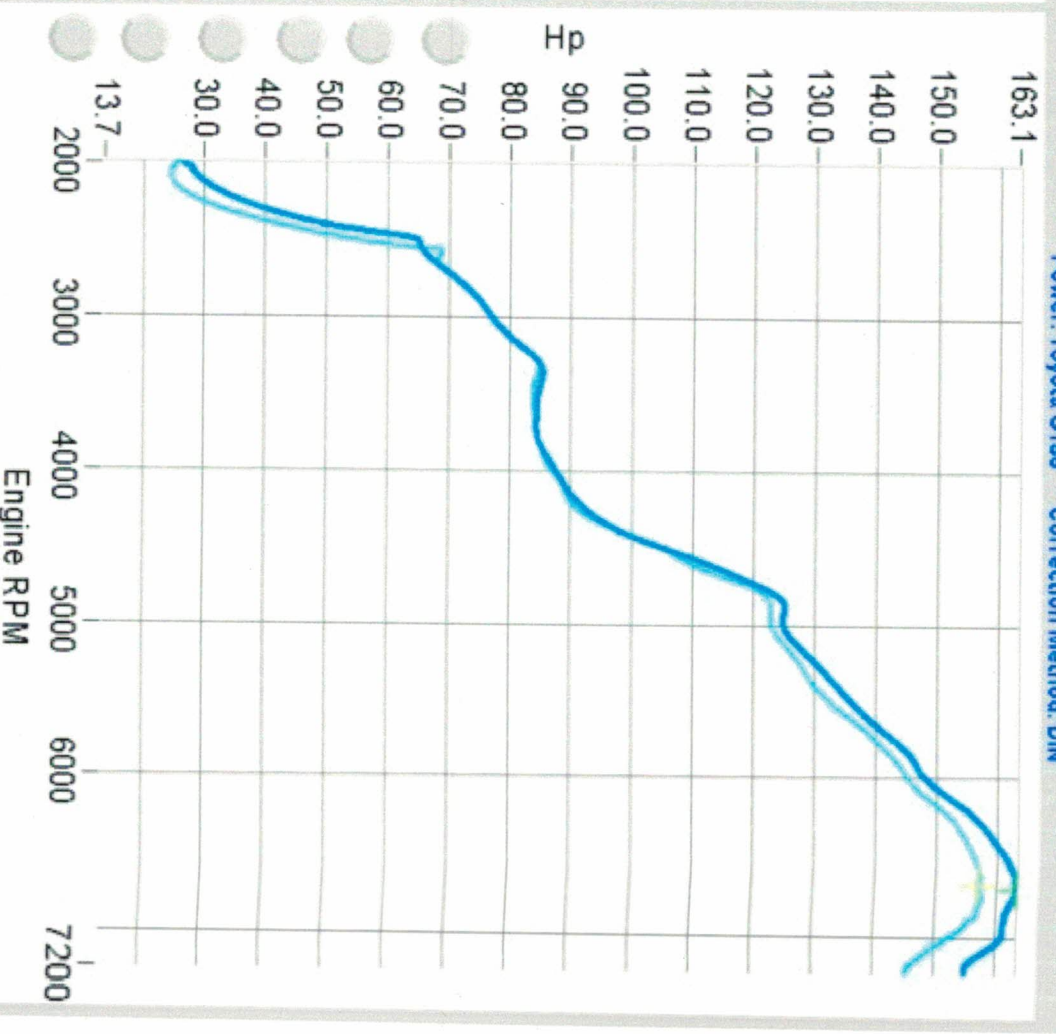

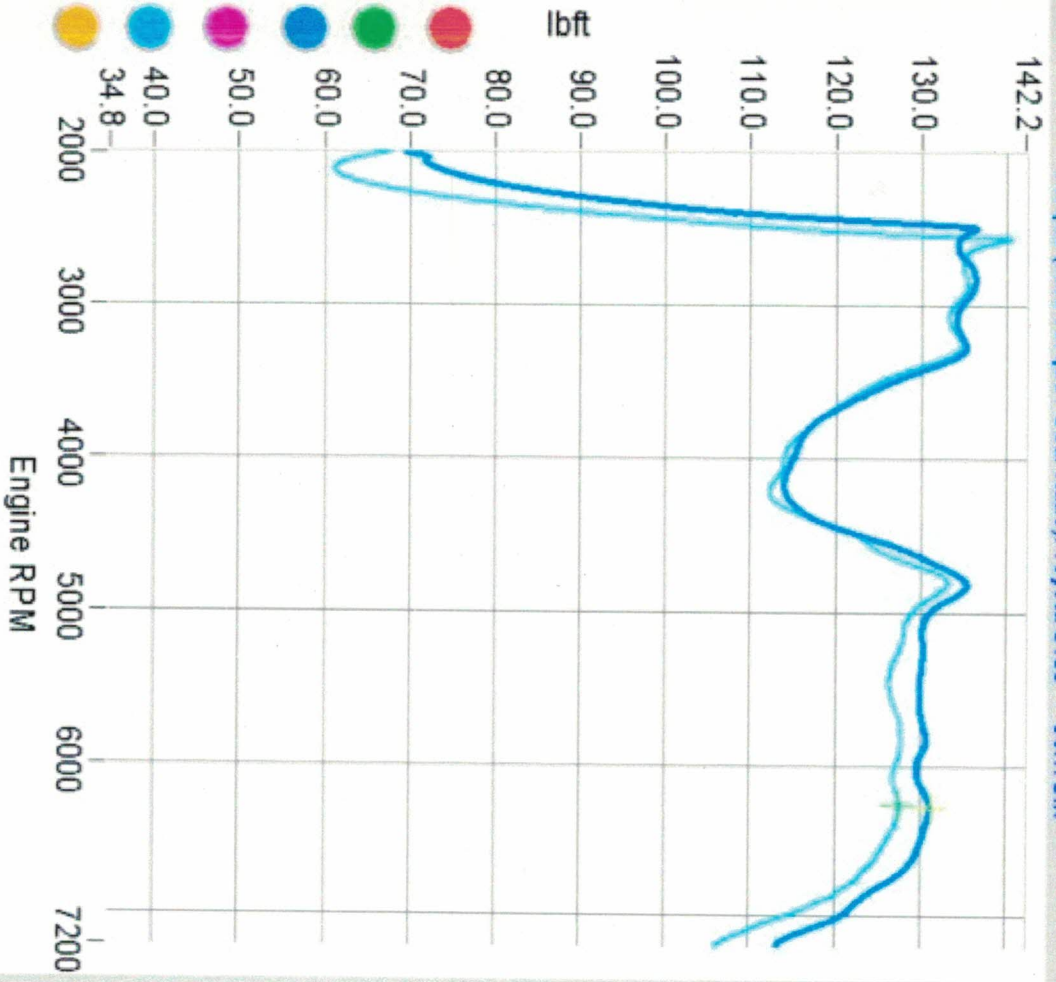

Mr. Jiří Jelínek, engine engineer: "I did some test with Millers Oils CFS range in previous years but they worked pretty the same as other high performance racing oils as Mobil 1, Motul or ELF. This new Nanodrive range is something extraordinary and in my long career in testing of engine performance I have never seen such rapid change in engine power with simple changing the oil with the same viscosity."

Ing. David Svída, Ph.D., Senior Lecturer of Dept. of Internal Combustion Engines: "This is the first product in category of lubricants doing and proving exactly that what it tells on the label. I am happy to see it on my own eyes. Please send me some detail information about this lubricants and I will tell to my students and colleagues."
